

2006 Tropical Cyclone Fatalities

After an all-time record number of named tropical cyclones in 2005, the Atlantic Basin was relatively quiet in 2006. There were only 9 named tropical storms, of which 5 had wind speed measuring hurricane force, compared to 15 with hurricane force winds in 2005. In an extremely happy about-face, there were no deaths in 2006, compared to the record 1,016 who lost their lives to hurricanes in 2005. The Pacific Basin was more active than the Atlantic with 19 named storms: 10 Hurricanes and 9 Tropical Storms, up from 15 in 2005.
